

Faith Annebelle Atieno

138 Eliot Mail Center, Cambridge, MA 02138 • Harvard College • faithannebelle@gmail.com • +1(857)-270-4280

EDUCATION

Harvard University

Cambridge, MA

Bachelor of Science Degree: Mechanical Engineering. GPA: 3.86

May 2027

Relevant Coursework: Computer-Aided Machine Design, Solids Mechanics, Mechanical Systems, Engineering Thermodynamics, Fluid Mechanics, Systems and Control, Energy Technology, Intro to Computer Science (C+Python), Intro to Electrical Engineering.

ACADEMIC PROJECTS & PROGRAMS

Egg Drop Design Competition | Mechanical Systems

Nov 2025

Designed and experimentally tested a 1-DOF mass-spring-damper suspension system to reduce peak impact forces during vertical drop tests, applying system dynamics and energy absorption principles to refine biologically inspired shock-mitigation designs

Dancing Robot Design Project | Intro to Digital Fabrication

Sept 2025

- Designed and prototyped a sound activated dancing robot using 3D printed parts and lasercut pieces as my main mechanical linkages, ESP32, actuators(DC and servo motors), and sensors (microphones, photoresistors)
- Calibrated sound sensors to trigger robot motion and developed a LAN-based web interface to control movement rhythm and song selection, enabling dual control modes

Turf War Robotics Competition Project | Computer Aided Design

Jan 2025

- Designed and validated a mechanical system using SolidWorks, incorporating GD&T for manufacturability and assembly
- Created engineering drawings utilizing GD&T. Performed experimental validation testing to characterize motor performance under load conditions and ensure system reliability. Fabricated parts by laser cutting and 3D printing, and assembled the robot

FindYourPeople Web Application Project | Intro to Computer Science: CS50

Sept 2023

- Built a web app using Python and Flask(hosted on GitHub) that connects users based on shared criteria while maintaining privacy such that only users with similar inputs can view each other's profiles
- Taught myself the backend logic beyond class content to match users securely and meaningfully, applying what I learned in CS50 to to create meaningful, private connections for users navigating shared experiences

PROFESSIONAL EXPERIENCE

Harvard University

Cambridge, MA

Undergraduate Researcher in the Bertoldi Group | PRISE Fellow

May 2025-Present

- Designed and executed controlled experiments to characterize mechanical performance and durability of textile-based material systems, translating data into design improvements
- Fabricated and tested prototypes with defined parameters, applying iterative validation and data-driven analysis to refine structural behavior under load

Course Assistant & Academic Resource Center Peer Tutor

January 2025 - Present

- Support students in STEM courses by breaking down complex technical concepts and adapting explanations to individual learning needs, improving comprehension and retention
- Collaborate with an instructor to lead a multivariable calculus class to enhance students learning, and lead the Math Question Center by answering questions and reinforcing class materials in students group settings

iXperience

Lisbon, Portugal

UX/UI Student Intern

May - July 2024

- Conducted user interviews and usability testing to identify functional and workflow inefficiencies in a startup web application
- Developed interactive prototypes in Figma to balance user needs with technical feasibility, contributing to a redesign that altered over 50% of core product decisions

LEADERSHIP AND ACTIVITIES

Harvard African Student Association

Cambridge, MA

Board Member, Social Chair

October 2023 – May 2025

Organized community-building events for 150+ attendees to foster belonging and cultural connection among African students

Society of Women Engineers | Harvard Chapter

Cambridge, MA

Board Member, Diversity Chair

July 2025 - Present

Lead initiatives to advance diversity, equity, and inclusion in engineering through programming, outreach, and planning events

SKILLS & INTERESTS

Computer/Technical: SolidWorks (GD&T, engineering drawings), Fusion 360, Arduino, MATLAB, Python, C++, COMSOL, Material Testing, PID Controls, EPANET, Revit, Microsoft

Fabrication & Prototyping: Machining (Milling, Drilling), Laser Cutting, 3D Printing, Prototyping, Assembly

Other Interests/ Involvement: NSBE2026, O4U2025, Engineers Without Borders, Harvard Clean Energy Group, Impact
